

Alex Truong

 20 years old
 University student

Fitness Level

Scenario
Alex is a 20-year-old full-time university student who wants to start working out but feels lost and unsure where to begin. They have tried looking up fitness routines online but find the information overwhelming and often contradictory. The fear of using gym equipment incorrectly and being judged by others makes them hesitant to even start.

Realizing they need structured guidance, Alex downloads the AI Gym App, hoping for a clear, beginner-friendly fitness plan. Their main goal is to build a consistent workout habit without feeling intimidated or lost.

Pain Points ↓
• Lack of guidance on where to start
• Overwhelmed by gym equipment
• Struggles with motivation and time management

Goals and Expectations ↑
• Simple & Easy-to-Follow Guidance
• Real-Time AI Form Correction
• Personalized Workout Plans
• Motivational Reminders
• Accessibility & Flexibility

Insights

Lack knowledge and fear judgment

Motivation drops over time

Time constraints affect consistency

Community boosts engagement

Personalization is important

Opportunities

Implement AI-powered form correction, guided tutorials, and interactive learning tools

Introduce gamification elements such as streaks, badges, progress milestones, and rewards to encourage long-term engagement.

Offer customizable workouts based on time and gym access, ensuring flexibility for busy students

Integrate social features like leaderboards, group challenges, and workout accountability partners to foster a supportive environment

Provide multiple content formats (video, text, audio) so users can learn in their preferred way, making workouts more accessible and engaging

Internal Ownerships

Product development team (AI feature implementation) & UX designers (tutorial design).

Gamification design team & behavioral psychology consultants.

App development team (customization algorithms) & content team (short vs. long workouts).

Community engagement team & app developers (social features).

Content development team & accessibility specialists.

Success Metrics

- Reduction in user-reported anxiety or confusion (measured through in-app surveys).
- Higher retention in first-time users completing at least 5 workouts within the first month.

- Increased average workout completion rate per week.
- More users maintaining consistent streaks (e.g., 3+ weeks of workouts).
- Higher engagement with social sharing of progress badges.

- Higher retention among busy users (students, professionals) who complete at least 3 short workouts per week.
- Increased usage of time-based workout customization features.
- Fewer drop-offs after the first few sessions.

- Higher participation in group challenges and leaderboards.
- Increased user referrals and social interactions in-app.
- More users reporting feeling supported/motivated through surveys.

- Higher engagement across different formats (tracking which content type is most used).
- Improved retention rates for users selecting customized learning styles.
- Positive feedback from accessibility-focused users.
